Press release from: [Dictao](#)

Paris, FRANCE – Dictao, a leading software publisher for strong authentication and electronic signatures, announces the opening of its electronic signature service based on the SWIFT 3SKey digital identity.

Dictao offers this electronic signature service to the members of the banking community. It will allow them to discover the uses of their 3SKey token through varied uses, such as electronic signatures and signature verifications, and the creation of proof.

This service is based on Dictao's software, already largely proven in the banking sector. At this time, six of the largest French banks depend on the Dictao platform to validate the signatures of signed files (whether they be wire orders, withdrawals, etc.) sent by their corporate clients in a multi-channel context (SWIFTNet/FileAct, EBICS, FTPS, HTTPS, etc.). In addition, two European central banks secure their exchanges with financial establishments thanks to Dictao's software. In order to respect the regulatory framework, more than 700 financial establishments depend on Dictao's technologies to sign their financial statements.

Dictao considers the SWIFT 3SKey solution to be a formidable opportunity to further develop trusted exchanges at the worldwide level. The alliance of this globally-recognized digital identity with Dictao's highly-certified software (EAL3+ level of the Common Criteria) is recognized by 26 countries throughout Europe, Asia and the Americas, and permits transactions to be carried out with complete confidence in an international context.

Dictao is pleased to offer this service at no cost at the following address: www.dictao.com/3skey/

Dictao is a leading software publisher in the areas of strong authentication and electronic signatures. We conceive, design and market products that allow for the implementation of functions crucial in a dematerialized world: user authentication, achieved through the electronic signature, and the creation of legally-binding transaction proof.
