

Syncro Soft Announces New Release of Syncro SVN Client v4.1

Date: 05.12.2008 - 22:36

Category: [IT, New Media & Software](#)

Press release from: [Syncro Soft Ltd.](#)

Syncro Soft Ltd, the producer of Syncro SVN Client, has announced the immediate availability of version 4.1 of its Subversion (SVN) client.

Version 4.1 of Syncro SVN Client adds a create patch wizard, a dialog for quickly resolving conflicts resulted from a merge action and considerable performance improvements.

For the complete list of features please visit www.syncrosvnclient.com

New in version 4.1:

Added a create patch wizard that allows you to create two patch types: a patch between a working copy resource and a repository resource or a patch between two repository resources or between two revisions of the same resource. Other options like the folder depth, ignore ancestry, ignore whitespaces or include unversioned files can also be specified.

All the conflicts resulted from a merge action are listed in a dialog in which each conflict can be manually resolved or you can choose a generic action for automatically resolving all of them.

Many common SVN actions like refresh, add, revert, update, merge, show history etc. were improved so that now they perform faster. Also, on Mac and Linux computers, you can control the SVN symbolic link support. If you don't need this support, you can disable it, which results in improved performance for common actions like those above.

A Scroll lock button was added in the Console view. It disables console automatic scrolling when a SVN operation logs many messages in it. This allows the user to control the view and have enough time to read the displayed messages.

The SVNKit library was updated to the latest version - 1.2.1 - that supports all Subversion 1.5.4 features.
